

ABSTRACT OF THE DISCLOSURE

Method for manufacturing successive spherical glass articles in each of which is accommodated a three-dimensional object of figuring, which method comprises the following steps, to be performed in a suitable sequence of: (a) providing a container with a mass of molten glass, which container comprises a discharge opening through which liquid glass can be delivered; (b) providing thermally resistant figurines; (c) wholly enclosing successively at least one figurine by molten glass by feeding molten glass thereto from at least two sides; (d) portioning the molten glass before or after step (c) such that molten glass masses are formed, in each of which a figurine is embedded; and (e) modeling these masses to a spherical form by substantially omnidirectional rolling for a time with simultaneous cooling so that the glass solidifies.
